

Pooched Bumpers

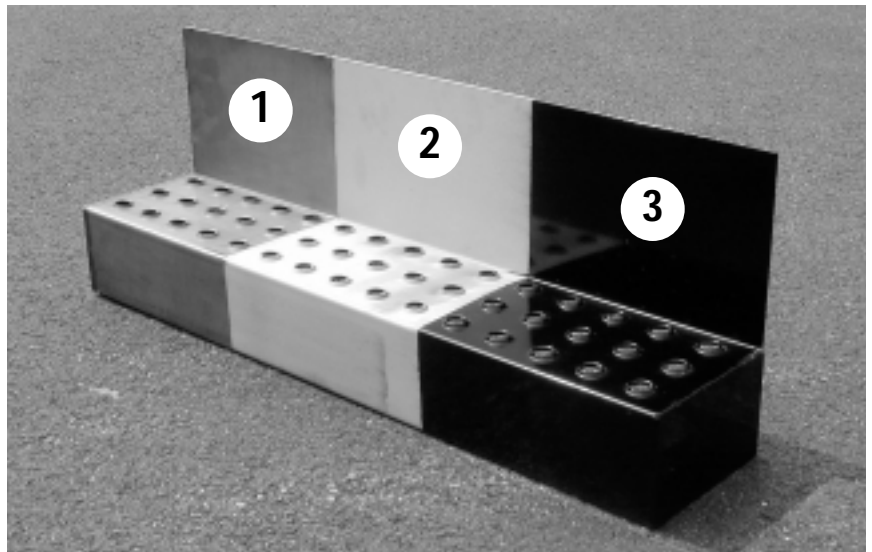

Reading introduces a new bumper style for their line of service and utility bodies. The Pooched bumper provides all-weather traction while maintaining the rust-free performance that has come to be synonymous with Reading's bumpers.

Pooched bumpers feature:

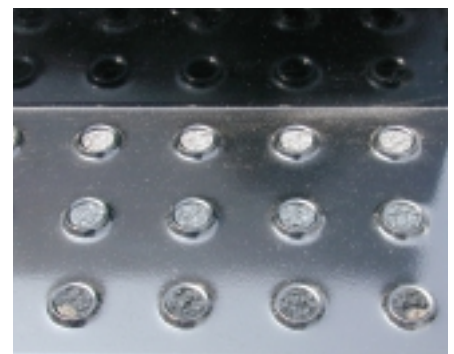

- Heavy 10-gauge steel construction.
 - A design that provides a raised traction surface.
 - Holes which allow dirt and precipitation to pass through rather than collect on the bumper's surface.
 - Protected with same hot spray galvanizing and powder coating as our existing bumpers:
- STAGES: (see photo on right)
1. Bare steel bumper
 2. Galvanized coating and Lectro-Life primer applied
 3. Optional powder coat applied

Reading's new pooched bumper

Bumper shows the progression of protection from bare steel to a tough but smooth powder coat finish.
